ABSTRACT

1	An improved method and system for cleaning a cylinder
2	of a printing press. One method involves soaking a strip of
3	cleaning fabric on a press with a low volatility organic compound
4	solvent. Excess solvent, if any, is removed to place the strip
5	of cleaning fabric in functional equilibrium with the solvent.
6	The cleaning fabric is then used to clean a cylinder.
7	Alternatively, the strip of cleaning fabric is soaked on site by
8	contacting the strip of cleaning fabric with the solvent and
9 □	wrapping the strip of cleaning fabric into a cleaning fabric
回 回 0	supply roll. The cleaning fabric is then brought in engagement
型1 丰 型2	with a printing press having a cylinder to be cleaned without
	disposing a sleeve around the fabric roll and without
	substantially disturbing the distribution of the solvent in the
_14	fabric roll and detrimentally affecting the cleaning ability of
∭ <u></u> 15	the fabric.
